## **Origin of the human logic**

Novikov N.B.

Institute of Psychology, RAS, Moscow,  
E-mail: novikov19721@rambler.ru

**Abstract.** The description of the basic forms of logic conclusions is given, the role of an induction and analogy in creative thinking is considered. The paper analyzes ethological data which demonstrate that higher animals are able to generalize and transmit information. This research allows to solve a question that was put by V.G. Red'ko: how biological evolution created the human logic and why logic forms are capable to reflect a reality adequately.

## **How origin of the human logic should be investigated**

Red'ko V.G.

Scientific Research Institute for System Analysis, RAS, Moscow  
E-mail: vgredko@gmail.com

**Abstract.** The article "Origin of the human logic" by N.B. Novikov is shortly commented. Steps of further investigations are proposed.
